

425

426 Figure 3 – Metal enrichment factors (EF) in relation to a reference site (site P4) for the  
 427 average CLP values reported in Fig. 3. ND denotes that EF was not determined since the  
 428 analytical sample presented a result below the analytical detection limit. Note that Cu EFs  
 429 from sites samples are related to a reference site concentration below the analytical detection  
 430 limit.
